

Exceptional Definitive Restorations With The Aesthetics, Strength And Function That You And Your Patients Are Looking For

■ **Denture Teeth and Acrylic Supported by a Milled Titanium Substructure**

Premium denture teeth and high impact denture resins allow for an economical, reline-friendly, repairable and natural look with an engineered, patient-specific titanium support bar substructure for a high level of strength. Includes a one-year warranty.

■ **Zirconia (Monolithic or with Anterior Cutbacks)**

Excellent physical, mechanical, biological and chemical properties ideal for implant-supported full arch hybrid prosthetics. High translucent CAD/CAM one-block structure reduces breakage and helps to avoid chipping. Can also add a CAD/CAM cutback with layered feldspathic porcelain on the facial aspect of the anterior teeth. Includes a one-year warranty.

- please see reverse side -

■ Nano-Ceramic

Designed with Crystal Ultra[®], some of the strongest aesthetic dental material available. Translucent, reline-friendly, repairable in the mouth and shock absorbent for full arch hybrid prosthetics. The Trilor[™] understructure is strong, but flexible, which may protect the integrity of osseointegration due to less transfer energy to the implants. Includes a six-year warranty.

■ Pekkton[™] Substructure with Individual Crowns

Combine strength with beauty, ultimate aesthetics and an adaptable combination of materials. Individuality of each tooth gives a lifelike appearance, pink nano-composite is reline-friendly and repairable with multiple tissue color shade choices. Pekkton has similar flexural characteristics as human bone and reduces stress to implant components and to the bone-to-implant interface. Includes a lifetime warranty on individual monolithic crowns (crowns may be lithium disilicate or zirconia).
