- Excessive bone loss requiring intervention
- Dehiscence requiring bone grafting
- Perforation of the maxillary sinus, inferior border, lingual plate, labial plate, inferior alveolar canal, gingiva
- Infection as reported by: abscess, fistula, suppuration, inflammation, radiolucency

Here's how nSequence[®] works!

It is possible to regain a natural, beautiful smile in as few as 3-4 appointments.

Dental implants can provide you with a better quality of life.

When you're missing many or all of your teeth, you want a dental solution that is customized just for you, returns your smile quickly and reduces your time in the dental office.

With nSequence[®] Implant-Supported Replacement Teeth through Immediate Loading and Guided Surgery:

- You have fewer appointments than traditional dental implant methods – Four appointments as compared to eight*.
- Surgery time is shortened because your case is planned out in advance
- You go home with a same-day smile that is customized just for you.

**Not all people are candidates for implant therapy. Speak to your dentist to see if dental implants are right for you. Number of appointments may vary.*

APPOINTMENT #1

Your dentist will gather all of your records by taking scans, photos, an impression of your smile and tooth shade and will then send all of the data via computer so that a custom set of teeth can be made. These teeth are scientifically designed for your mouth and facial features so that they are a personalized fit.

APPOINTMENT #2

Your surgeon places the implants and in just a few short hours, you can leave the office with a beautiful temporary implant-supported restoration that looks, feels, and functions like real teeth. This will allow you to have the ability to chew, smile and live your life normally.

APPOINTMENT #3

Your dentist checks your mouth to ensure that you are ready for your final implant-supported teeth and sends all of your final information to the laboratory.

APPOINTMENT #4

Your final implant-supported restoration is placed.

It's that simple!
