

Say Goodbye to Surgical Guesswork with NDX Keller CBCT Surgical Guides!

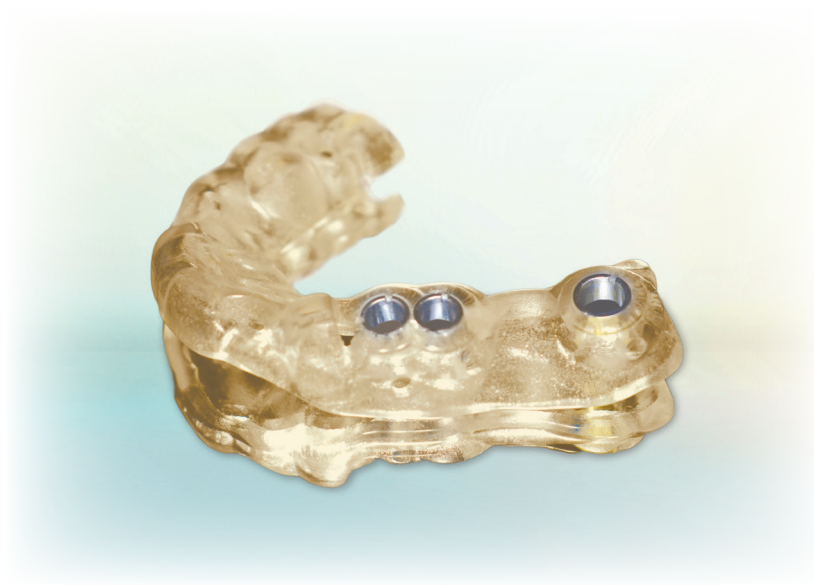

Even the simplest cases can be difficult when you are placing implants. Understanding the proper positioning for your implant can lead to better primary stability, less chance for injury, greater predictability and ultimately, a better outcome for your patient.

With NDX Keller CBCT Surgical Guides, you will be able to perform surgery in a more expeditious manner, which is planned out digitally beforehand, allowing you to treat your patients more confidently:

- No guesswork because cone-beam technology delivers a scan that clearly determines bone volume and the possibility of any anomalies, leading to a more efficient and precise surgical procedure
- Capability of overlaying STL files to ensure a clear representation of present dentition, which allows for better aesthetics

For more information or to order a guide, please visit NDXKeller.com or call 800.325.3056

- Guides are compatible with all guided systems from major implant manufacturers
- Guides are delivered quickly to the dental implant office
