

Indications

- Crowns
- 3 unit bridges

Contraindications

- Cantilever pontics

Advantages

- Excellent aesthetics
- Positive gingival response
- Eliminates black or gray margins
- Fast turnaround time

Health

- The advanced gold coping material is proven to reduce the accumulation of harmful bacteria at the gum line by 90% compared to natural tooth structure.

Strength

- The infusion of platinum and palladium into gold produces an extremely dense and strong coping.
- Extreme bond strength between the porcelain and Captek gold reduces fractures.

Aesthetics

- Captek gold does not oxidize, eliminating the black or gray margins of traditional PFMs.
- The warm gold color of Captek's understructure used to produce the gold copings provides natural light dispersion.

What to Send

- Upper and lower models or impressions
- Shade
- Bite registration

Insurance Codes

- D2750 - Single Crown PFG
