NTI Daytime

NTI Nighttime

Simple Steps to a Maximum Protrusive Measurement

- Instruct the patient to protrude their mandible as far as possible
- While in the most protrusive position, use a ruler to measure from the labio-incisal of upper centrals to lingual-incisal of lower incisors

Daytime and Nighttime Appliances for patients whose habit extends into their waking hours.

Indications

General Upper and Lower Indications and:

- Migraine or severe headache patient needing daytime therapy for muscle relaxation and pain relief in addition to night therapy.
- A “habit-breaking” appliance for a daytime bruxer or clencher, and our standard NTI design for nighttime relief.

Contraindications

- May adversely affect speech or appearance for some patients.

Patient Care Instructions

- Simply run the device under warm water (no toothpaste) each time you remove it
- Do not use alcohol or alcohol-based products for soaking or cleaning
- Never boil the NTI-tss Plus

What to Send

- Full arch VPS impressions, models or digital files
- Maximum protrusive measurement

Insurance Codes

All plans are different so the coverage may vary. In general, the same insurance codes for splints, TMJ appliances, habit appliances all apply to the NTI-tss Plus.

Some useful codes are:

- D9940: Occlusal Guard, by report
- D7880: Occlusal Orthotic Device, by report
- D8210: Removable Habit Appliance

For Medical Submission:

- CPT 21110-52 Interdental Fixation Device/D 7880 Orthotic Appliance
- 2015/16 ICD-10-CM M26.60 Temporomandibular joint disorder, unspecified
- 2015/16 ICD-10-CM M26.69 Other specified disorders of temporomandibular joint

Turnaround Times

Please allow 2 weeks for case turnaround.
