- Looks natural
- Metal-free
- Lightweight
- No metallic taste

Need a Removable Partial Denture?

YOU HAVE OPTIONS

Missing teeth can compromise the ability to speak, eat, or smile and can even impact overall health. A proven solution for restoring many or a few teeth on the upper or lower arch is a removable partial denture (RPD). Patients eligible for an RPD now have more options than ever before.*

Partial dentures made from a metal framework have been the standard for many years and are still the most prescribed alternative. However, this option can be less optimal for a number of reasons.

Metal-frame partial wearers may experience a heavy feeling in the mouth, damage to remaining teeth, visible metal when smiling and a metallic aftertaste.

THERE IS A BETTER OPTION:

Ultraire™ AKP

Ultraire™ AKP Metal-free Partial

Ultraire AKP is a high-performance polymer designed by Solvay Dental 360™ that replaces traditional metal frames in RPDs and offers superior comfort and aesthetics.

WITH AN ULTAIRE AKP FRAME, YOU CAN EXPECT:

- A comfortable, lightweight and biocompatible frame
- Superior fit and stability
- No lingering metallic taste
- An improved appearance, with no visible metal

*Patients should consult with their dentist to select the right material for construction of their removable partial denture.
