

# NDX H&O offers a variety of materials for your crown and bridge cases.

We are committed to providing our clients with the most beautiful and functional restorations for their patients.

## ZIRCONIA

With an extensive clinical history of working with full contour zirconia, NDX H&O provides an economical, efficient solution for posterior restorations when strength is a must. With these incredibly strong all-ceramic crowns, you can provide your patients with the strength to withstand severe parafunctional activity.

## PORCELAIN-FUSED-TO-METAL

Porcelain-fused-to-metal restorations have been a mainstay of prosthetic dentistry for more than half a century. Their flexibility in design, from no exposed metal to metal occlusal, allows the PFM to be utilized in many clinical situations, including parafunction and limited space. PFMs work well as single units and bridges.

## FULL CERAMIC

The aesthetic demands of patients have been increasing through the years. NDX H&O's array of full ceramic crowns is designed to meet this demand. These restorations offer high translucency, natural vitality and excellent marginal integrity.

We offer a range of restorative options, including both all-ceramic and metal-based materials, to meet the needs of your patients. Our solutions are designed to provide durability, aesthetics, and functionality, ensuring the best outcomes for every smile.”
