

NDX Paramount offers a variety of materials for your crown and bridge cases.

We are committed to providing our clients with the most beautiful and functional restorations for their patients.

ZIRCONIA

With an extensive clinical history of working with full contour zirconia, NDX Paramount provides an economical, efficient solution for posterior restorations when strength is a must. With these incredibly strong all-ceramic crowns, you can provide your patients with the strength to withstand severe parafunctional activity.

PORCELAIN-FUSED-TO-METAL

Porcelain-fused-to-metal restorations have been a mainstay of prosthetic dentistry for more than half a century. Their flexibility in design, from no exposed metal to metal occlusal, allows the PFM to be utilized in many clinical situations, including parafunction and limited space. PFMs work well as single units and bridges.

FULL CERAMIC

The aesthetic demands of patients have been increasing through the years. NDX Paramount's array of full ceramic crowns is designed to meet this demand. These restorations offer high translucency, natural vitality and excellent marginal integrity.

NDX Paramount provides a range of aesthetic options and materials for our crowns, tailored to meet the needs of our customers. We are committed to ensuring the highest quality and prompt delivery of our products back to the doctor's office."
