

## NDX Heumann Topeka offers a variety of materials for your crown and bridge cases.

We are committed to providing our clients with the most beautiful and functional restorations for their patients.

### **Zirconia**

NDX Heumann Topeka provides an economical, efficient solution for posterior restorations when strength is a must. With these incredibly strong all-ceramic crowns, you can provide your patients with the strength to withstand severe parafunctional activity.

### **Porcelain-Fused-to-Metal**

These restorations have been a mainstay of prosthetic dentistry for more than half a century. Their flexibility in design, from no exposed metal to metal occlusal, allows the PFM to be utilized in many clinical situations, including parafunction and limited space. PFMs work well as single units and bridges.

### **Full Ceramic**

The aesthetic demands of patients have been increasing through the years. NDX Heumann Topeka's array of full ceramic crowns is designed to meet this demand. These restorations offer high translucency, natural vitality and excellent marginal integrity.

We offer a variety of fixed restorative options. Our lab works with both digital and traditional workflows. We have a high level of commitment to our doctors to help achieve the best patient experience. Our team is always available and welcomes all communications to serve your needs.”
